

LS C&S Busduct System

I-series

About LS Cable & System

LS spun off from LG in 2003 as a group specializing in the Electrics, Electronics, Energy, and Material. LS consists of about 40 affiliates including LS Cable & System, LSIS, LS-Nikko Copper, LS Mtron, Gaon Cable, E1 and Yesco. A leading player in the global cable industry, with over half a century of experience as a manufacturer, providing consolidated expertise in the design and production of premium quality cabling technologies.

Total Solution Provider for Electric Power and Telecommunication Industries

LS Cable & System, the longtime de facto holding company of LS Group, officially transformed into a holding company in July of 2008. The company's operations now encompass a total solution for electric power and telecommunication industries.

The latest change in corporate structure comes as the company is accelerating efforts to improve management efficiency in rapidly expanding markets. The move also results from efforts to effect a more responsible and transparent management structure. Management is now prepared to take more aggressive action to enhance our businesses and to identify new growth engines. The holding company will take the lead in fostering new growth engines and in identifying lucrative investment opportunities, while the company's other business units will focus on improving management and on making operations more efficient. With the continued support of the holding company, LS Cable & System will spearhead efforts to strengthen our business expertise, corporate competitiveness and management.

LNG, CNG

Supply of LPG for residential&commercial, transportation, industrial and petrochemical uses in domestic market. Import & Export of LPG etc.

LS Mtron

Components, Machinery

LS-Nikko Copper

Electrolytic Copper Cathode, Gold, Silver, Chemicals Product etc.

GBON

Control Cable, Power Cable, Elevator Cable, etc

Enable the Cabled World!!

LS Cable & System, established in 1962, has been contributing to building power grids and communication networks first in Korea and then in countries all over the world by developing, producing and providing cables and related solutions used in daily life and throughout many industries. Furthermore, the company set the stage for industrial and economic development by capitalizing on our innovative technology to supply various special industrial cables and industrial materials.

We at LS Cable & System are now supplying state-of-the-art products, such as submarine, extra-high voltage, high temperature superconducting and communications cables to power authorities, heavy electric equipment makers and common carriers around the world. Our products can be seen throughout the Americas, Europe, the Middle East and Asia, so we are now recognized as a leading manufacturer serving global industries both in name and reality.

Based on our corporate philosophy, "LS Cable & System Way," we will go beyond simply generating profits to develop forward thinking competencies by innovating our business models, developing environment-friendly high-quality products and reinforcing our partnerships with stakeholders as the best partner that will maximize customer values. We will open a brighter future by innovating and investing in technologies that push the envelope and developing the best total solutions.

LS Cable & System
Leading Solution

LS Cable & System Busduct System Solution

Buildings

The LS C&S Busduct system is easy to install, and ensures large capacity of energy transmission while providing space efficiency which makes the bus duct system ideal for high-rise buildings, office buildings, data centers and apartment complexes.

Plants

The full lineup consists of NSPB, CAST RESIN and SIB that can cover up to 27kV, and the lineup thus enables us to provide our clients customized designs. The system is suitable for electrical rooms and power lines, and it features a real-time monitoring system using the temperature and power monitoring system.

Data Center

The flexibility and expandability as well as easy maintenance property of the busduct system provides the best alternative to improve the existing problems of the conventional power cable system of data centers, which requires constant extension, reinstallation and capacity modification of loads.

Apartment Buildings

Although the demands for more electricity for families are growing, the space for EPS area has reduced. Due to the change, the need for busducts and multi boxes have increased.

Hospitals

The stability of the power supply in the hospitals is perhaps the most vital element, because its failure could threaten the safety of patients.

The Busduct system distributes larger capacity of electric power, and provides stability of the loads which make it an ideal choice to satisfy the requirements of systematization of hospital complexes and larger hospital equipments.

Airports

In order to secure the stable power supply of the airport, the busduct system provides the best customized solutions by installing high voltage busducts at the transmission, transformation and power distribution lines, and by installing low voltage busducts at the cargo, the control tower and general commercial buildings.

Stadiums

The needs for a busducts system has been growing for its benefit such as large capacity of power transmission, providing a stable power supply for various loads and an eco friendly property as well as economical quality.

Marine & Wind

The compact and light weight design of the busduct satisfies the demands of the clients, and comes with an outstanding quack resistance property. The busduct provides stability to the operation of the facilities through a real-time monitoring system using a temperature and power monitoring system. As the needs for renewable energy grows, the demand for our busduct has been increasing steadily.

LS Cable & System Busduct Product Line-up

The LS Cable & System Busducts are available in a wide range of products from low current capacity LT-way (25A~63A) to large current capacity (630A~6300A), and the products enable the supply of proper capacity of power for factories and the distribution system. Our products such as the air insulated bus conducts with enhanced safety property and the cast resin busducts with resistance for high temperature, humidity and dusty environment will satisfy various application needs and provide a customized engineering service.

Iz/Ix/If-way

Sandwich Type (PET Film, Epoxy Coating, MICA)/AL Extrusion Housing/Standard IP54/Joint Kit

- Designed for low voltage products below AC 1000V, and between 630A to 6300A.
- The most widely used conventional model.

Mini-way

Air Insulated Type/AL Extrusion Housing/Standard IP54/Joint Kit

- Designed for low voltage products below AC 1000V, and between 160A and 800A.
- Ideal for small distribution system with multi distribution loads (Vertical areas of buildings, data centers, assemble factories)

LT-way

Flat Wire Type/Copper Conductor with PVC Extruded Insulation/AL Extrusion Housing/Various Plug Types/Joint Brush (It can be installed with a live wire.)

- Designed for low voltage products below AC 690V, and between 25A and 63A
- Suitable for Light bulbs, FFU and distribution for small equipments

MS/Wind-way

Air Insulated Type/ Compact NSPB Type / One-Bolting Type Designed for low voltage products below AC 1000V, and between 1000A and 5000A

- A Hybrid incorporating NSPB and sandwich type
- Ideal for ships, wind towers and chemical plants where stability is required.

NSPB-LV/MV

Air Insulated Type/Insulated conductors separated by phase/AL, STS and Steel Housing (optional)/Indoor Type/Outdoor Type

- NSPB-LV : Designed for low voltage products below AC 1000V, and below 4000A
- NSPB-MV: Designed for high voltage products below AC 27KV, and below 4000A
- Suitable for plants where high stability is required.

CR-LV/MV

- Cast Resin Type/IP 68/Epoxy Molding between Conductors

- CR-LV: Designed for low voltage products below AC 1000V, and between 630A and 6300A.
- CR-MV: Designed for high voltage products below AC 27KV, and below 5000A.
- The most safe bus duct suitable for plants where high stability is required.

CR-LV-II

- Cast Resin Type/IP 68/Epoxy Molding between Conductors and Housing

- AL Housing(Steel and SUS as optional)/Indoor/Outdoor
- Designed for low voltage products below AC 1000V, and between 630A and 6300A.
- Suitable for area with high humidity or rapidly changing temperature
- Easily jointed with Sandwich type Busduct

Why Busduct?

Easy Distribution of Loads

When supplying power using cables, each load has to be connected individually to cables which waste space, and an additional distribution panel is also required.

On the other hand, busducts are separated from a single line at a plug box which simplifies the electric power system. A MCCB can be installed at the plug box to effectively shut off fault current.

Cable Wiring System

- One-to-one correspondence of power supply and loads
- Additional lines are needed in case of a load change

Busduct Wiring System

- One-to-many correspondence of power supply for specific power supply
- Additional lines are not necessary in case of a load change

ACB : Air Circuit Breaker, MCCB : Molded Case Circuit Breaker

Easy Installation

Pulling and cable tray installation for cables can be difficult, and requires a longer construction period, therefore increases the cost. On the other hand, the busducts use a simple installation method to connect specific length of products, which requires a shorter installation period, and is economically friendly.

Compact

The compact design of the busduct system provides high space efficiency at up to 50% compared to the cables. While cables require larger space to install multi lines as well as additional space for coiling areas, the busducts use proper fittings to maximize space efficiency.

Adaptability to various installation environment with convenience

The busduct system is a power distribution system and can be applied to various complex routes. The busduct system comes with various fittings such as elbow, off-set and tee, and can transmit high capacity currents without electrical and mechanical loss.

Excellent short circuit strength

The busduct system has a high tolerance for short circuit. Its stability and reliability make it perfect for a high capacity energy transmission system.

High current density

Cables are connected directly to electric loads using racks. Its maximum allowable current ampacity limit is 1000A, and requires additional lines for a higher current. Each line of the busduct system can transmit up to 6300A, and provides high current density.

Easy maintenance

The design of the busduct system makes it easy to detect abnormalities during installations, and ensures easy maintenance. When humidity or dust causes a malfunction on the system, the easy-to-maintain design allows replacing only the damaged part.

Outstanding features of EMC and EMI

Unlike cables, the busduct system does not require a shield, instead Busduct, the housing itself performs as a shield which enhances the features of EMC and EMI.

Why LS Cable & System Busduct

Global Top Tier

LS Cable & System has been a long-time leading Busduct provider in Korea. With extensive experience and product line competitiveness, the company provides total solutions for each application to satisfy the needs of its clients. Using its expertise in the electronic markets of large LCD monitors and semiconductors in Korea, the company has obtained PJT sales records in 50 countries worldwide in Asia, the Middle East, CIS, and America.

Full Line – up

LS Cable & System is the only global company that provides a full line-up of busducts, from low to high voltage and from low to high capacity, to satisfy every need of its clients and provide an optimized solution for each PJT.

Total Solution

- Once PJT launches, our engineer will participate to guide the clients from the initial period in order to produce the best system for our clients, and to respond quickly when the system is changed.
- Our engineers from each department provide full support in design, production, installation and testing at in-bound to satisfy our clients.
- We operate the CS Team, a task force for the busduct system, to make sure efficient after-sale service and maintenance service.

Process

Technical Excellence

Unparalleled Reliability

- Provides standardized design, and owns numerous certifications such as UL Certification, Quack Proof Certification, and Impact Resistance Certification
- The CS team, a task force for the busduct system, provides efficient after-sale service
- Safe use in hazardous zones
- Manage the system using a unique temperature monitor sensor
- Semi-permanent service life
- Used qualified insulation such as epoxy and PET film for efficient insulation

Eco friendly

- Fully recyclable
- Halogen free
- Does not contain RoHS 6 hazardous substance
- No toxicity in fire & Fire-Retardant
- Non Explosive

Total Engineering Technology

- Provide the optimal design by experienced engineers
- Design following analysis and inspection of CAE
- Unique and exclusive design program for the busduct system
- Design based on structure stability inspection
- The excellent heat –radiating property of the aluminum housing, which ensures large capacity of power transmission
- Low Weight & Low cost
- Easy installation
- Deployable where access is difficult
- Automated epoxy insulation facility
- Unique joint kit connections
- Reduce electromagnetic
- BPMS (Busduct Power Monitoring system)
- BTMS (Busduct Temperature Monitoring system)

The Busduct Temperature Monitoring System (BTMS : Busduct Temperature Monitoring System)

The busduct is a large capacity power distribution system. The insulation of the duct has to stay stable when the Joule lines occur during a power supply of the conductor. The rated current will be set by the insulation type and the temperature rises. These properties of the busduct make it possible to monitor and manage abnormalities of the system by checking the temperature of specific areas of the system.

The temperature monitoring system uses various temperature sensors such as optical fiber cable, IC electric chips and thermo-graphic cameras. Specific areas like the entire system line, joints, plug-in boxes and cable connection can be monitored at the central monitor room using various methods on request.

The Busduct Power Monitoring System (BPMS : Busduct Power Monitoring System)

The ongoing trends of the busduct system are more than a simple power supplying system. The growing trend is; 1) the stability of the power system, 2) unmanned system, 3) cost cutting, and 4) green and smart grid. While the SCADA system monitors and controls the power of the main system, the BMS monitors low loads of the sub system. The frequency of the recent electrical accidents is higher at the sub system than at the main system. Therefore, the preference for the BMS system has been increasing.

Overview

The I-Series

The LS C&S I-Series Busducts are designed to carry voltage range below AC 1000V, and to carry the current range of 630A to 6300A. Joint kit connections provide more space to connect which reduce the contact resistance to its minimum while connecting products. LS C&S I-series Busduct comes with a standard IP54 rating; however, it can be upgraded to an indoor or outdoor IP65 rating on request. I-Series Busducts have three different types of insulation using polyester film, mica film, or epoxy powder.

Compact Size

LS C&S I-Series Busduct uses an effective heat radiating housing profile which allows the size of the conductors to be smaller than the existing Busduct models. The light weight of the Busduct also allows easier installation and requires less space.

Economical and Easy Installation

LS C&S I-Series Busduct uses aluminum housing and joint kit connections which enable easy installation with less time and low cost.

Easy Distribution of Loads

LS C&S I-Series Busduct can directly distribute the loads at the plug-in box using a single line, and thus simplifies the power supply system. The MCCB can be installed in the plug-in box on request to effectively shut off the faulty current.

Application

Electrical Rooms

- The busduct can be installed both horizontally and vertically at the electrical room.
- The maximized safety features are seismic-proof and explosion-proof.
- Provides excellent space efficiency and easy installation compared to cables.

Commercial / Housing Building etc.

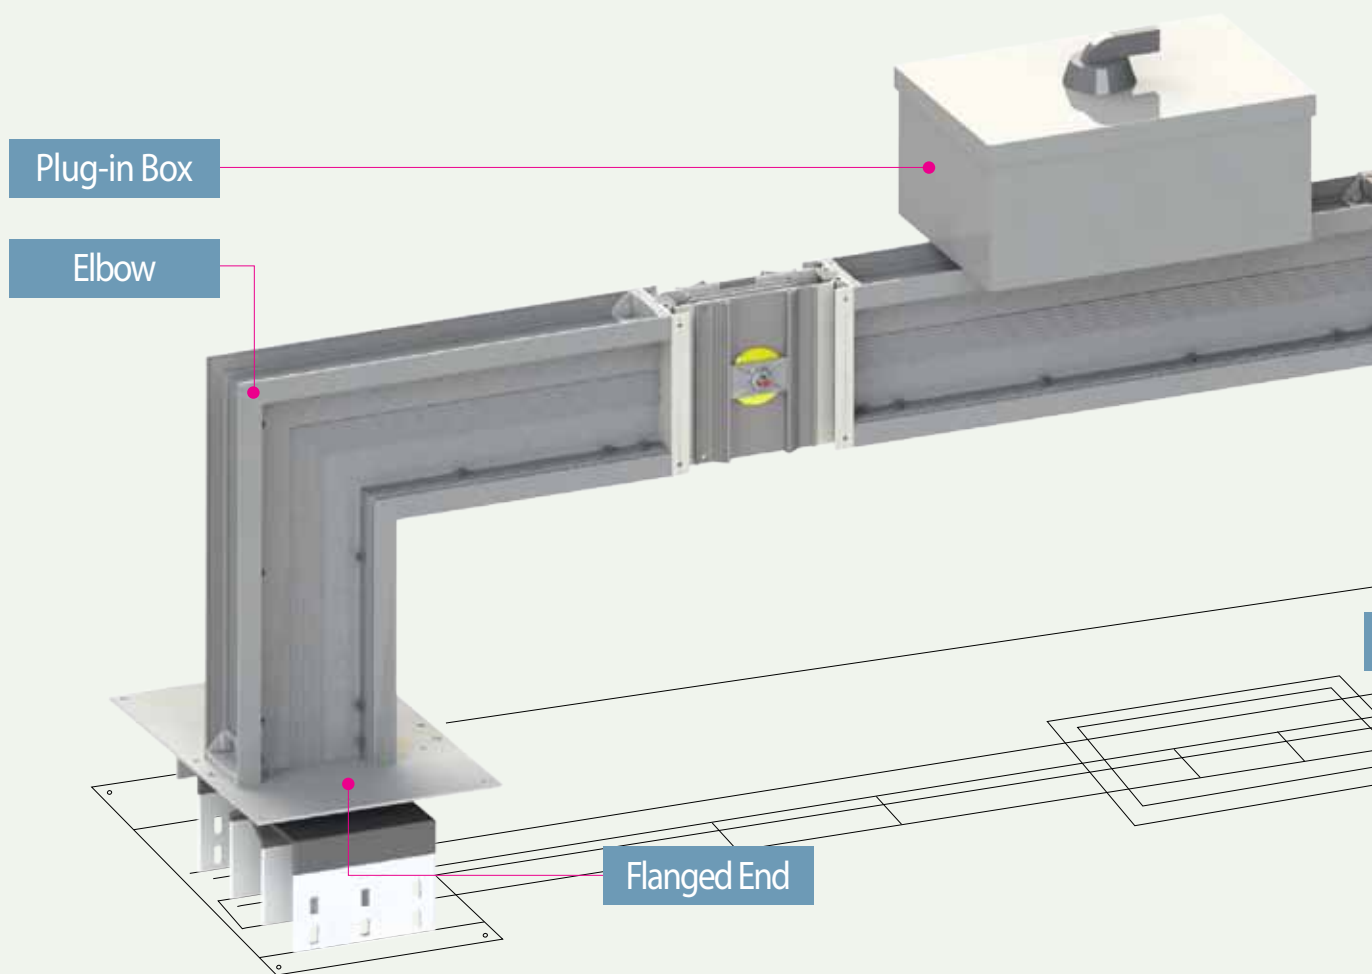

- Provides excellent space efficiency.
- The busducts can be applied to high-rise buildings, office buildings, and data centers.
- Multi-box can be applied on request.

Factory / Plant etc.

- The busducts can be applied to a vast range of industries such as semiconductor, display and petrochemical plants.
- The temperature and the power supply monitoring system allows easy maintenance.
- The busducts provides high space efficiency, and allows a significantly reduced installation period.

High Current Density

The busduct has a compact design compared to the existing models by using an effective heat-radiating housing profile and can carry from 630A up to 6300A with reduced loss of electric power. It is an ideal power distribution system that provides high efficiency, stability, economy-friendliness and convenience. The design of the conductor allows flexibility to extend and relocate depending on the environment.

Eco - Friendly

The LS C&S Busducts acquired RoHS certification, and only uses components without hazardous substances such as lead, cadmium, mercury, chrome, PBBs and PBDEs.

Low Voltage Drop and High Short Circuit Strength

Thanks to the optimum design, power can be transmitted with the greatest possible efficiency, and the resultant voltage drop is low due to extremely low impedance. In addition, the LS C&S Busducts is designed to have high short circuit strength. Reinforced type is available. contact our engineering staff

Standard

- IEC 61439-1 [(previous standard)IEC 60439-1] Power Switch gear and Control gear Assemblies
- IEC 61439-6 [(previous standard)IEC 60439-2] Busbar Trunking Systems
- BS EN 61439 Busways
- NEMA BU 1.1 Busways
- AS / NZS 3439.2

Permissible Operating Temperature

The cross sectional areas of the conductor and housing profile are designed to meet the standard permissible operating temperature of IEC 61439-1 and 6. Therefore the temperature rise limit of the housing is within 55K or less of the ambient temperature.

Service Condition

- Ambient Temperature : -15°C ~ 50°C
- Relative Humidity : 95% or below
(When the service condition of the environment does not meet the requirements listed above, please contact our design team.)

Conductors

The I-Series uses either copper conductors with conductivity over 98% and purity over 99.9%, or aluminum conductor with conductivity over 61% and purity over 99.6%

Housing

The I-Series uses an effective heat-radiating aluminum housing profile which produces an excellent mechanical strength and heat radiation. The aluminum housing can be used as a protective conductor(PE) due to its high level conductivity and cross sectional areas. An optional optical fiber temperature sensor can be installed at the housing.

Insulation Properties

An insulator of thermal class rating Class B(130°C) (Class F(155°C) optional) is applied to the I-Series. Other insulation options such as Epoxy, PET and MICA (Fire proof up to 1200°C) are also available. FRP (Fiber Reinforced Plastic) with high dielectric property is used as insulation at the connection which performs as insulation between phases and housing.

Connection

- **Kit**: DH (dual head) bolts and Visible-label (Redtag)
Check for installation using the contact
To exert a uniform force on the entire connection can Disc Spring A structure. (Assembly Torque 800 ~ 1000kgf.cm)

General Specifications

I-series Busduct uses insulation with a thermal class rating over 130°C for each phase. A sandwich type design is applied to the Busduct to protect the aluminum housing, and it can be used at the voltage range of AC 1000V or less, and the current range between 630A to 6300A. It is designed to use a joint kit connection and general IP54 rating.

Joint Connection

Feature

Both joint plates of the joint kit and the conductors are tin plated. (A silver plated option is available.)

It prevents the joint plate from discoloration and corrosion. In order to ensure easy maintenance and reliability, double-headed bolts and visible labels are used to check the application, and a disc spring allows even connection of the contact surface.

Double Headed Bolts

Double-headed bolts are used to ensure a proper torque level when installing the joint kit.

If a torque wrench applies a pressure of 800 to 1000kgf.cm to the outer bolt head, the head of the outer bolt and the tag attached to it will be sheared off automatically.

Thus, it allows visual inspection for the proper application of the bolts at the connection.

The remaining bolt head can be re-used when tightened to 800kgf.cm using a torque wrench.

After installing joint cover, red line at the end of double headed bolt should be seen through the inspection cap.

Joint Kit

Number of Double headed bolts (60hz)

Number of D.H bolts		1	2	3	4	6
Ampere (A)	AL	630, 800, 1000, 1250, 1450, 1600	1850, 2000, 2250, 2500, 2900, 3200	-	3700, 4000, 4500	5000, 5800, 6300
	CU	630, 800, 1000, 1250, 1450, 1600, 1850, 2000	2250, 2500, 2900, 3200, 3700, 4000	5000, 5800	4500	6300

Number of Double headed bolts (50hz)

Number of D.H bolts		1	2	3	4	6
Ampere (A)	AL	630, 800, 1000, 1250, 1600	2000, 2500, 3200	5000	4000	6300
	CU	630, 800, 1000, 1250, 1600, 2000	2500, 3200, 4000	5000, 6300	-	-

! Precaution

Be sure to clean the interior of the connections prior to installation. Use caution not to twist the joint kit while inserting it, and after it is inserted.

An excessive pressure during installation may break the kit.

Make sure that the double-headed bolts and the red tags are intact.

If proper torques are not applied at the connection, it may cause heat during operation.

Grounding and Harmonics

I-Series Busduct comes with aluminum housing, and the cross-section area of the housing is over 100% of each phase conductor. Therefore, the aluminum housing alone works as 100% or more of ground bar, and the housing also improves the heat radiation of the conductors.

If increased ground capacity is required, additional internal ground bars can be added to the assembly, providing a 50% or 100% increase in ground path.

The 200% N type Busduct is used for a nonlinear load that generates harmonic current. Lately, the needs for non-linear loads at the power distribution system of buildings are increasing due to the increase of office automation and computer facilities. The harmonic current produced by the system can flow more than 100% of over current at phase N. The LS C&S 200% N type busduct is safe to be used at the distribution system where the harmonic current can be generated.

Plating/Painting

Plating

Standard tin plating is applied at taps, plugs and connections of conductors using an electroplating method to maintain the electrical characteristics and to prevent corrosion. Silver plating is available on request.

Painting

In order to improve heat radiation and to prevent corrosion, as well as to fit in with the surroundings, we apply polyester-epoxy (hybrid) power coating after treating the surface. A wide range of color is available to meet the needs of our clients.

*Standard color : RAL 7032

IP Code (Degree of Protection)

International protection degree codes provided by IEC 60529(Degree of Protection Provided by Enclosure-IP Code)

NEMA STANDARD : • IP54=NEMA 12, 12K, 13 • IP55=NEMA 3, 3X, 3S, 3SX • IP66=NEMA 4,4X • IP67=NEMA 6
 * As the standard differs, it is a similar substitution, not 1:1 substitution.

The degree of protection against water of the LS C&S I-Series is a standard IP54; however, it can be adjusted from IP42 to IP65 depending on the environment and on request.

IP

Solid Particle Protection

-  **0 No Protection**
-  **1** Protection against 50mm diameter solid particles. (back of a hand)
-  **2** Protection against 12mm solid particles. (fingers)
-  **3** Protection against 2.4mm solid particles. (tools or thick wires)
-  **4** Protection against 1mm solid particles. (tools or most wires)
-  **5** Protection against dust.
-  **6** Complete protection against dust.

Liquid Ingress Protection

-  **0 No Protection**
-  **1** Protection against falling drops of water.
-  **2** Protection against falling drops of water with an enclosure tilted at a 15degree angle from a vertical line
-  **3** Protection against spray sat a 60degree angle from a vertical line
-  **4** Protection against water splashed from all directions.
-  **5** Protection against low pressure jets of water from all directions.
-  **6** Protection against strong jets of water from all directions.
-  **7** Protection against the effects of immersion between 15.0 centimeters and 1.0 meter.
-  **8** Protection against longer periods of immersion under pressure.

Degree of Protection IP54

IP54 is applied to the feeder, plug-in and tap-off, and can be used during water leakages and near sprinklers.

Indoor

Degree of Protection IP55/IP65 (Indoor/Outdoor)

With the IP65 rating, the busduct is ideal for corrosive environments. The special sealing between the housing sections seals off water, dust and gasses.

Indoor Type (IP55/65)

Outdoor Type (IP65)

Fittings

I-Series Busduct has a wide range of fittings to satisfy any layout of buildings. Elbow angles other than 90° are also available. Fitting designs are shown in the following figures, and they consist of the source-side and the load-side. Offset or combination elbows can be used where standard elbows are not feasible. (Dimensions for each fitting are shown in the following figures. Contact our design team for a minimum dimension.)

Elbow

T/R Connection Feeder

Fittings

Expansion

The fitting is designed to allow a 60mm extension of a straight line.

Rating	Standard Dimension(mm)	
	X	Y
630~6,300A	1,500	360

*Flexible bars installed inside

Reducer

A reducer is used to connect a large capacity busduct to a small capacity busduct. It can be used for an economical setup to distribute loads.

*Any change made to load distribution or to capacities follows electricity regulations.

Reducer Box

If an overcurrent breaker needs to be mounted on the reducer by customer request, it is possible to use the reducer box.

Phase Transposition Feeder

A phase transposition feeder is used when the setup transforms the phase.

Hanger

Vertical Mounting Hangers

Spring hangers are used to support the busducts between floors. The number of springs depends on the weight of the installed busduct and plug-in boxes. A medium hanger should be installed if the height between the floors exceeds 4.5 meters, and the height of the installed spring hangers can be easily adjusted. Rigid hangers (no spring type) are used on the lowest floor, and they can be used instead of spring hangers depending on the set up design.

[Rigid Hanger]

[Spring Hanger]

Rigid Hanger

[1 Row]

[2 Row]

[Side View]

Spring Hanger

[1 Row]

[2 Row]

[Side View]

* Hangers with more than 2 rows depending on the installation environment are also available on request. Please contact the design team for further information.

Hanger

Horizontal Hangers

General Hangers

The standard installation method for these hangers is to install them horizontally at 1.5 meters intervals. They generally require 12mm diameter stud bolts.

Wall Bracket

Wall brackets can be installed on a wall where general hangers are not feasible.

Plug-in Unit

Straight Lengths: Plug-in / Tap-off Intervals

This busduct comes with an overcurrent blocking device (MCCB, fuse) in order to protect the wires while distributing loads. The required minimum intervals of a plug-in(800A or less) and a tap-off(1000A, 1250A, 1600A) are shown below. A length longer than the required minimum intervals can be predestinated on request.

Plug-in Feeder

MCCB Frame (AF)	Plug-in Hole Intervals(P) (mm)
50, 125, 250	650
400	900
630, 800	1,000
1000, 1250	1,300

Plug-in Box

MCCB Frame (AF)	Dimensions(mm)				Fig.
	W		D	H	
125	200	230	200	360	E5-1
250	200	230	200	360	
400	230	280	200	800	
630, 800	300	370	200	800

[Fig. E5-1]

Inspection Pin

This pin is used to check the insertion of the box.
*Available from 400AF box

[Before]

[After]

[Fig. E5-2]

Plug-in Unit

Plug-in Box Attachments

Attachments such as CT,TD and PT can be installed in a plug-in box to control and to supervise the current, voltage and wattage remotely.

Door Types of the Plug-in Unit

Various design of doors for the plug-in box is available to satisfy the demands of our clients. The available types are shown below.

External handle

Push Button

External lever interlock

Bolt Fastening

Key Lock

Outlet

Etc.

Wall Flange

A wall flange is used to seal the gaps produced during installation of busducts at the walls, ceilings and floor. The standard dimensions of a wall opening should be 30mm larger than the external dimensions of the I-Series Busduct.

Component

Floor Openings

The standard dimensions of a floor opening should be 30mm larger than the external dimensions of the I-Series Busduct.

Etc.

The Required Minimum Distances from a Wall for Heat Dissipation and Maintenance

The required minimum distances between a busduct and a wall, or a ceiling are shown below.

The required minimum distances between busducts

The required minimum distances between busducts are shown below.

	Standard Dimension (mm)		
	3W and 3W	3W and 4W	4W and 4W
P1	110	135	130
P2	150	175	180
P3	190	215	230

* Outdoor installation requires a further discussion with our design team about proper distance.

Technical Data (60Hz)

Impedance and Voltage Drop

The formula to measure the voltage drop of a busduct is shown below. The impedance and voltage drop values for aluminum and copper conductors are shown in the table below.

The values listed are measured between upper and middle lines at 60Hz.

$$V_d = I \times \sqrt{3(R \cos\theta + X \sin\theta)}$$

V_d = voltage drop[V] · I = rated road amperes[A] · R = resistance[Ω] · X = reactance[Ω] / \cos = power factor / \sin = reactive factor

$$\text{Actual voltage Drop} = \alpha \times V_d \times \frac{\text{Actual load current}}{\text{Rated load current}} \times \frac{\text{Actual length of the line (m)}}{100m}$$

· α (Load Constant) $\alpha = 1$, concentrated load
(a place such as an electrical room)

$\alpha = 0.5$, Distributed load
(a place such as a vertical section)

· **F**: Flanged End (panel connections)
· **P**: Plug-in Unit

Technical Data (50Hz)

The formula to measure the voltage drop of a busduct is shown below. The impedance and voltage drop values for aluminum and copper conductors are shown in the table below.

The values listed are measured between upper and middle lines at 50Hz.

$$V_d = I \times \sqrt{3}(R \cos\theta + X \sin\theta)$$

V_d = voltage drop[V] · I = rated road amperes[A] · R = resistance[Ω] · X = reactance[Ω] / \cos = power factor / \sin = reactive factor

$$\text{Actual voltage Drop} = \alpha \times V_d \times \frac{\text{Actual load current}}{\text{Rated load current}} \times \frac{\text{Actual length of the line (m)}}{100\text{m}}$$

· α (Load Constant) $\alpha = 1$, concentrated load
(a place such as an electrical room)

$\alpha = 0.5$, Distributed load
(a place such as a vertical section)

· **F** : Flanged End (panel connections)
· **P** : Plug-in Unit

Technical Data (60Hz)

Short Circuit Strength

LS C&S Busduct has been tested under actual short circuit conditions according to IEC 61439-1 and 6 [(previous standard) IEC 60439-1 and 2] at KEMA and ASTA. The result and the graph are shown below.

Phase to Phase Short Circuit Ratings

Ampere(A) (60Hz)	AL (kA)			CU (kA)		
	1 sec	3 sec	Peak	1 sec	3 sec	Peak
630	25	14	52.5	20	12	40
800	25	14	52.5	20	12	40
1,000	50	29	105	35	20	73.5

Temperature Rise

The temperature rise limit is an important property which determines the performance of busducts. The temperature rise limit of the busduct is designed that when a busduct is operated with a rated current, the temperature limit values of the housing are within 55K as specified in IEC61439-1 and 6 [(previous standard) IEC 60439-1 and 2].

Joint Connection

Joint KIT

Both parts should be aligned at the top and the bottom and the left and the right as well as horizontally and vertically. (This also applies to the joint connection of the horizontal and vertical ducts.) Make sure that the joint kit is not tilted. (We recommend a jig tool for the installation.)

Using a torque wrench, slowly tighten the exposed bolt head of a double headed bolt. The head of the double headed bolt is designed to break off at 800~1000Kgf·cm. Continue tightening the exposed head until it breaks off.

Once the exposed head and the red tag attached to it have been cut off, a red line should be visible, which means they are properly connected. Be sure to check the distance from the housing, and the gaps between the conductors at the kit after the installation.

Before applying the connection cover, check the space between the end block and the holes of the connection cover. The red line should be visible through the transparent cap.

Perform the last inspection of the connection.
